DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Asao et al. (6,268,678) in view of Radomski (4,882,515).

Regarding claim 1, Asao et al. show a dynamoelectric machine comprising:

- A rotor composed of two flux carrying segments (22, 23), each segment having $P/2$ (8, $P=16$) claw poles, wherein P is an even number, and
- N (2, Figure 4) independent sets of three-phase stator windings inserted in a plurality of slots defining a stator, each set of three-phase windings shifted from each other by $\pi/(3n)$ radians (Figure 4, $n=2$ giving 30 degrees).

Asao et al. do not show a rotor composed of more than two flux-carrying segments.

Radomski shows a rotor composed of more than two flux-carrying segments (70, 72, 82, 86) for the purpose of generating more electrical energy at low speed.

Since Asao et al. and Radomski are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

Art Unit: 2834

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to make the rotor with more than two flux carrying segments as taught by Radomski for the purpose discussed above.

Regarding claims 2-20, it is noted that Asao et al. and Radomski also show all of the limitations of the claimed invention.
